# Tutorial 9: Graph Algorithms II

**CAB301 - Algorithms and Complexity** 

School of Computer Science, Faculty of Science

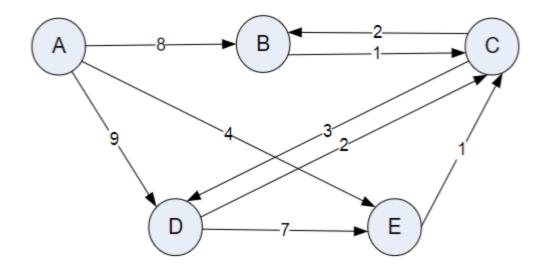

## **Agenda**

- 1. Lecture Recap: Graph Algorithms II
  - Shortest Path Problem
  - Dijkstra's Algorithm
  - Floyd's Algorithm
- 2. Tutorial Questions + Q&A

#### **The Shortest Path Problem**

What's the shortest path from A to B?

It's actually  $A \rightarrow E \rightarrow C \rightarrow B$ , with a total weight of 6 units, instead of  $A \rightarrow B$  with a total weight of 8 units.

EQSA Provider ID PRV12079 Australian University | CRICOS No. 00213J

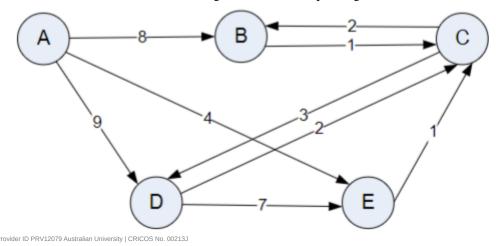

### Dijkstra's Algorithm

#### <small>

Find the shortest path from a **start node to all other nodes** in a weighted graph, by 1) visit nearest node, and 2) update the distances of unvisited nodes, via the selected node.

QUT

## Floyd's Algorithm

#### <small>

Find the shortest path between **all pairs of nodes** in a weighted graph, by 1) consider all nodes as **intermediate nodes**, and 2) update the shortest path if a shorter path is found.

</small> <div style="display: flex"> <div style="flex: 0.6">
